ABSTRACTION

- ❖ During the COVID 19 crisis, the requirement of plasma became a high priority and the donor count has become low.
- ❖ In regard to the problem faced, an application is to be built which would take the donor details, store them and inform them upon a request

OBJECTIVE

- ❖ To develop an application which will act as a helping hand for the patient who was in need of the plasma.
- ❖ The main objective of the proposed solution is to create database to store the donor details and to notify them upon receiving request from the patient
- ❖ To develop an application which having great responsive user interaction.
- ❖ To create a user-friendly application for saving the lives which are in the danger.
- ❖ To increase the plasma donors using by minimizing the procedures of plasma donation.

EMPATHY MAP

IDEATION

STEP 1:

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

- 🕒 10 minutes to prepare
- 🕒 1 hour to collaborate
- 👥 2-8 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 10 minutes

A Team gathering

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

B Set the goal

Think about the problem you'll be focusing on solving in the brainstorming session.

C Learn how to use the facilitation tools

Use the Facilitation Superpowers to run a happy and productive session.

Open article →

1

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

🕒 5 minutes

PROBLEM

How might we... built an application which would take the donor details, store them, and inform them upon a request.

Key rules of brainstorming

To run an smooth and productive session

Stay in topic.

Encourage wild ideas.

Defer judgment.

Listen to others.

Go for volume.

If possible, be visual.

Step 2:

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

TIP

You can select a sticky note and hit the pencil (switch to sketch) icon to start drawing!

Anbarasi.B

Bakylakshmi.S

Bharani.S

Janani.A

3

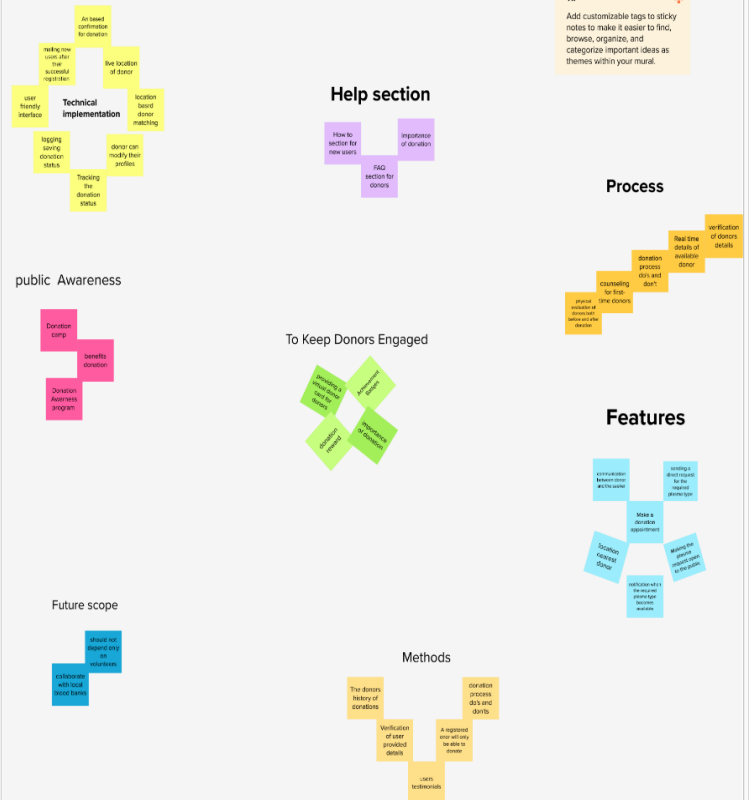

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

TIP

Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mural.

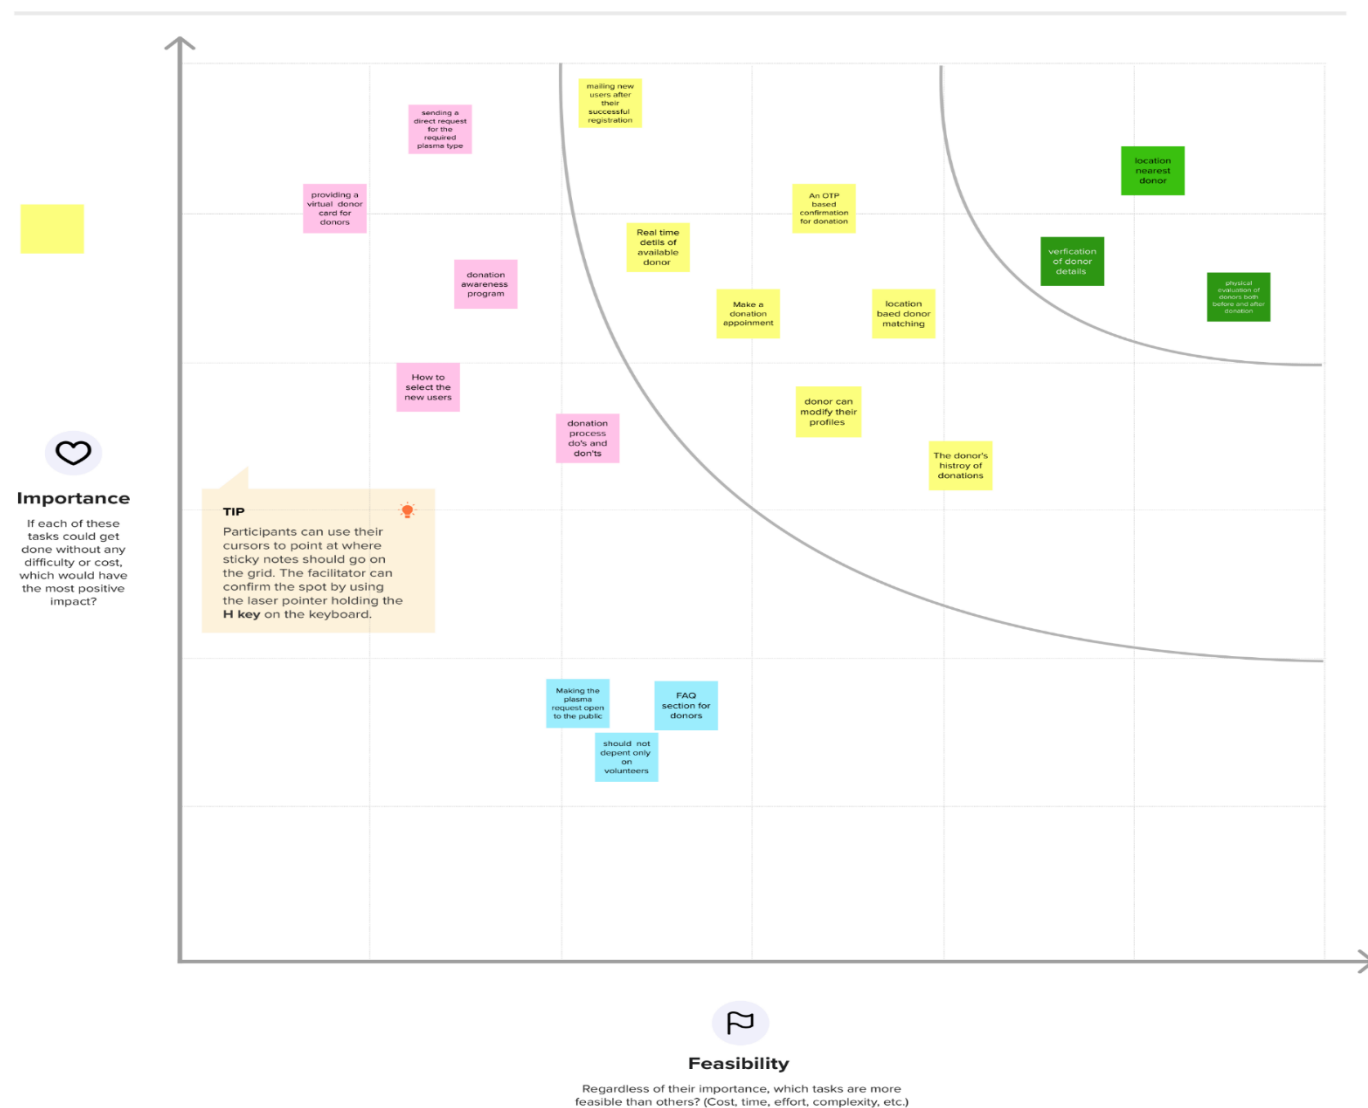

STEP 3:

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

🕒 20 minutes

LITERATURE SURVEY

Paper 1: Blood donor app usage behaviour and perceptions: Considerations for a blood donation app (Andrea Potgieter, May 2022)

This article aimed to determine whether South African blood donor app usage behaviour and perceptions were conducive to introduce a blood donation app, and what these behaviours and perceptions could reveal, to support South African Blood Donation Organizations in their recruitment and engagement endeavours. The research problem discussed in this article sought to highlight the app usage behaviour of blood donors, and their perceptions about a proposed blood donation app. forming part of a larger sequential mixed-methods study, the data presented in this article were gathered through a quantitative online questionnaire involving 2154 South Africans respondents. The value of this research lies in the insight gained into the behaviour and perceptions of South African blood donors, which can inform the conceptualization and design of a blood donation app, thereby improving its efficacy and subsequently supporting the strategy of employing such a technology to increase blood donation.

Paper 2: Evaluation of the Wateen App in the Blood-Donation Process in Saudi Arabia (Tourkiah Alessa, April 2022)

The aim of this research was to evaluate the usability, user satisfaction and perceived usefulness of this blood-donation app in Saudi Arabia. A mixed-method study was conducted comprising a quantitative questionnaire with donor and qualitative semi-structured interviews with healthcare professionals. Descriptive analysis was used for the quantitative data and a thematic approach for the qualitative data. Quantitative data analysis was conducted using SPSS software package 19 to calculate descriptive statistics. This blood-donation app is highly usable and acceptable among donors and healthcare professionals in Saudi Arabia, offering several benefits. Some accessibility issues were identified, along with possibilities for improving accessibility and expanding the app's functionality.

Paper 3: Location-based Mobile Application for Blood Donor Search (Fernando Alex Sierra-Linan, January 2022)

The research proposes the development of a location-based mobile application for blood donor search (DONAPE), for which the mobile application provides a direct location-based channel between blood seekers and blood donation centers. Achieving to increase the number of donors, improve the place of origin (geographical location) of donors and improve the search time. They chose to use the agile Scrum method to develop the project prototype. This method has 5 phases: initiation, planning and estimation, implementation, review and retrospective and launch, for the development of this project. In web and mobile applications were developed to manage blood donation, allowing to register, schedule, receive notifications and access information, synchronizing

blood donation centers with emergency centers, to verify the availability of blood needed and to send a request to the nearest blood donation center.

Paper 4: A Cross-Platform Blood Donation Application with a Real-Time, Intelligent, and Rational Recommendation System (Rashik Rahman, September 2021)

In this research work, they have designed a real-time, intelligent, and rational recommendation system using sentiment analysis of the user's feedback, response rate of the donor, and the current geo-location information and finally develop a cross-platform application for blood collection and distribution system. To process and generate features from the user feedback, they have designed a Bi-directional LSTM-based deep learning model. They chose the flutter framework to develop our cross platform applications. Firebase, a Google platform for mobile and web applications, has been used in the proposed application for authentication man. The quality of the recommendation of the potential donors has significantly improved. Moreover, they have conducted rigorous requirement analysis from real users and evaluated the performance of the application through both indoor and outdoor testing.

Paper 5: Preferences and features of a blood donation smart phone app: A multicenter mixed-methods study in Riyadh, Saudi Arabia (Afaf Ali Batis, March 2021)

To identify the features and preferences of a blood donation smart phone app for blood donation centers and donors in Riyadh City, Saudi Arabia. This is a mixed-method study composed of a quantitative cross-sectional part (with donors, using a self-administered questionnaire), and a qualitative/quantitative part (with blood donation center staff, using semi-structured interviews). Data were collected between 15 November 2017 and 5 February 2018, from four blood donation centers in Riyadh City, Saudi Arabia. A descriptive analysis was used for the quantitative part and a thematic approach for the qualitative par

Paper 6: Instant plasma donor recipient connector web application (Kalpana Devi Guntoju, Tejsvini Jalli, Sreejauppla, June 2022)

Donor who wants to donate plasma can simply upload their recovered covid19 certificate and can donate the plasma to a blood bank. The blood bank after checking the donor certificate can make a request to the donor when the donor accepts the request, they can add the required number of units they need. The hospital can send a request to the end a request to the blood bank that needs the patient's emergency plasma and to get the plasma from the blood bank. on. After the donor login to the After running the code, the URL is displayed and the user needs to paste the URL into the browser. At the end of the URL, you need to add the donor login to open the donor page, b-bank login for the blood bank page, and h-login for the hospital page. Donors who wish to donate plasma can donate by uploading their COVID19 recovery certificate on the donor's page. If the donor is new, they must register before log in. If the donor is an existing user they need to login. Username and e-mail provided at the time of registration.

PROBLEM STATEMENT

| Problem Statement (PS) | I am (Customer) | I'm trying to | But | Because | Which makes me feel |
|-------------------------------|---------------------------|--|-----------------------|------------------------------|----------------------------|
| PS-1 | Donor | To Search for Donation Centre nearby my location | Not able to search | Lack of Technology | Worried |
| PS-2 | Blood seeker | To search for plasma | Unavailable Resources | Registration is not done | Frustrated |
| PS-3 | Health care professionals | To check for Volunteers For Plasma Donation | No clear information | Unpopularity Of Blood Centre | Tensed |
| PS-4 | Third person (Society) | create awareness of Donation | Not Effective | Limited Support In Public | Dissatisfied |

PROPOSED SOLUTION

| S.No. | Parameter | Description |
|-------|--|--|
| 1. | Problem Statement (Problem to be solved) | Saving the donor information and helping the needy by notifying the current donors list. |
| 2. | Idea/Solution description | an application is to be built which would take the donor details, store them and inform them upon a request. |
| 3. | Novelty/Uniqueness | The application was created to send the nearby donor details to the needy people. |
| 4. | Social Impact/Customer Satisfaction | In the pandemic period the requirement for plasma went high and the donor count has reduced, this application was created to help the trauma patients. |
| 5. | Business Model (Revenue Model) | It will be a non-profit organization |
| 6. | Scalability of the Solution | Since the project uses IBM DB2 database it can handle with multiple requests in various regions |

PROBLEM SOLUTION FIT

Define CS, fit into CC

1. CUSTOMER SEGMENT(S)

CS

6. CUSTOMER CONSTRAINTS

CC

- Clear understanding of analysis due to visualization technique
- Any kind of customers can understand the analysis and interpretation
- Less time consumption

5. AVAILABLE SOLUTIONS

Provide perfect data report after deep analyse of past data. Helping them out to overcome loss in farming and business.

2. JOBS-TO-BE-DONE / PROBLEMS

JP

- Seasons with average productions
- With years usage of area and production
- Top 10 states with most area
- State with crop production
- States with the crop production along with season
- Dashboard creation.

9. PROBLEM ROOT CAUSE

RC

In order to estimate the crop yield to increase the quality and reduce the risk management.

7. BEHAVIOUR

BE

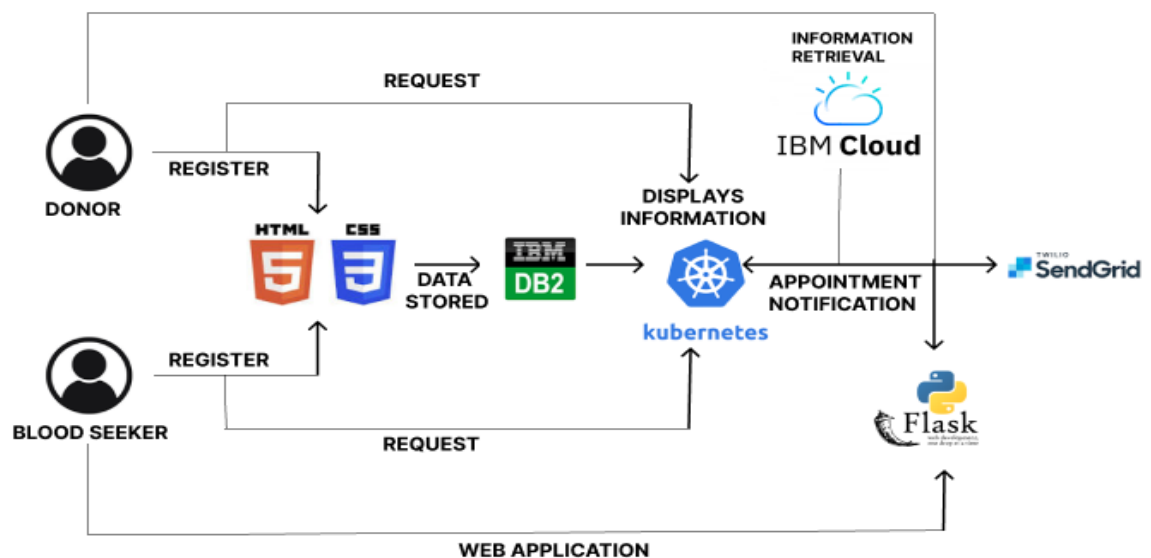

- User should provide correct input for analysis
- Dashboard should be provided with best algorithm to give feasible solution.

Ensure on JP fit into BE understand RC

SOLUTION ARCHITECHERE

CUSTOMER JOURNEY

DATA FLOW DIAGRAM

Project Design Phase-II

Solution Requirements (Functional & Nonfunctional)

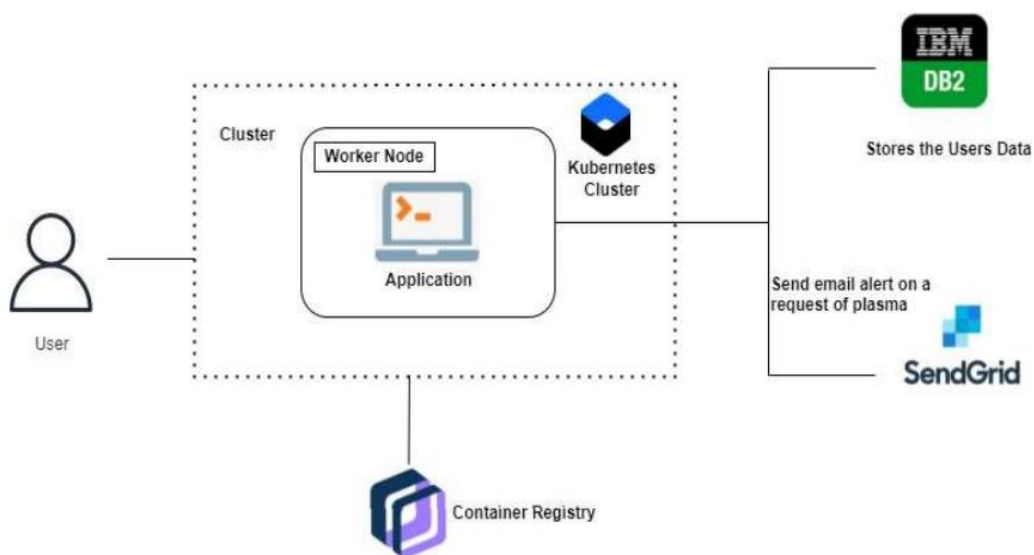

FUNCTIONAL REQUIREMENTS :

| FR NO | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task) |
|-------|----------------------------------|--|
| FR-1 | User Registration | Registration through the Form (WebApp) |
| FR-2 | Certification | After the donor donates plasma, we will give them a certificate of appreciation and authentication. |
| FR-3 | Statistical data | The availability of plasma is given in the page as status, which will be helpful for the users. |
| FR-4 | User Plasma Request | Users can request to donate plasma by filling out the request form on the page. Once the request is submitted, they will get an email |
| FR-5 | Searching/reporting Requirements | Users can use the search bar to look up information about camps and other topics. |
| FR-6 | Virtual Assistants | A virtual assistant is a software agent that can carry out tasks or provide services on behalf of a person in response to commands or inquiries. When users enter their inquiries, the system will respond with pertinent information about plasma and details of plasma donation. |
| FR-7 | User Confirmation | Confirmation via the Email Confirmation via the OTP |

NON FUNCTIONAL REQUIREMENTS :

| NFR-NO | Non-Functional Requirement | Description |
|--------|----------------------------|---|
| NFR-1 | Usability | Must have a good looking User friendly interface. |
| NFR-2 | Security | It must be secured with the proper username and password. |
| NFR-3 | Reliability | The system should be made in such a way that it is reliable in its operations and for securing the sensitive details. |
| NFR-4 | Performance | Users should have a proper Internet Connection |
| NFR-5 | Availability | The system including the online and offline components should be available 24/7. |

Technology Architecture :

Technical description:

| Sl.No | Parameter | Description |
|-------|--------------------------|---|
| 1. | Is the System Robust? | Yes, the system is robust that it can't be crashed intermittently and it has been tested for several times before placing it to the high availability environment. |
| 2. | Is it highly modifiable? | Yes, the system is modifiable and it can admit to the changes by detecting errors that needs to be fixed and new functionalities. It is highly Responsive changes. |
| 3. | Is it Scalable? | Yes, the system proposed is highly scalable as it can handle the growing workload where good performance is also needed to work efficiently. Deployment of the platform has been done using various OS virtualization platform it will handle the workload statistically. |
| 4. | Is it buildable? | Yes, it is partially buildable platform as the budget required will be more as cloud is a pay per use model and time taken will be quite comparatively less. |

DONAR Eligibility

WHO CAN DONATE PLASMA?

DONORS MUST BE:

- 18 yrs+*
- 110 lbs.
- MEDICALLY SCREENED
- TESTED NEGATIVE FOR SPECIFIC VIRUSES

*SEE YOUR PHYSICIAN

- Plasma donors should be at least 18 years old
- Plasma donors should weigh at least 110 pounds or 50 kilograms
- Must pass a medical examination
- Complete an extensive medical history screening
- Test non-reactive for transmissible viruses including hepatitis and HIV
- Follow a recommended diet including 50 to 80 grams of daily protein

Before donating plasma it is important to:

- Drink plenty of water or juice to be fully hydrated
- Notify center personnel if you have had recent surgery
- Notify center personnel if you have obtained a tattoo or piercing within the past 12 months
- Notify center personnel if you are taking medication or are under a doctor's care for any medical condition

Because the need for plasma is so great, we are looking for committed donors. It is only after two satisfactory health screenings and negative test results within six months that you may receive Qualified Donor status. Until you have met this requirement, your plasma will not be used to manufacture therapies. This is important to help ensure the quality and safety of the therapies that patients need to treat life-threatening diseases.

Donor Eligibility is at the sole discretion of the plasma collection facility.

Conclusion

- ❖ In our project we successfully created one user friendly app which can collect the donor details and store them in the cloud and given the details to the needy people .
- ❖ In our app we use DB2 for the storage ,SendGrid for mail service and IBM cloud for the data's storage. At last all the details were deployed to the Kubernetes.
